Bacterial bioregulator

A **live bacterial bioregulator** for systemic use based on **wild hay bacillus and wild plants**. Diagnoses and corrects internal processes and conditions. Removes all types of pathogenic agents, toxins and decay products from the body.

Natural concentrated bacterial functional cellular nutrition. **Restores the structure and function of cells, including the genome.** Helps **maintain the length of chromosome telomeres.**

Functional nutrition

** not a drug or a d*

ФИЛД

ated
ature

Functional medicine

Non-drug, **personalized systemic microbiome** preventive restoration of the body's resource and adaptive capabilities at the cellular level.

Completely natural product.

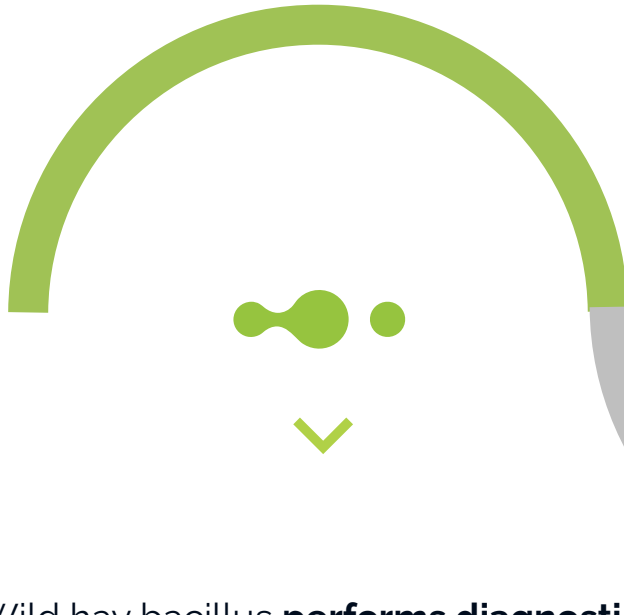

It is not a transgenic product, does not contain recombinant strains, genetically modified organisms (GMO), chemical preservatives, allergens, toxins.

Safe medicine

ietary supplement

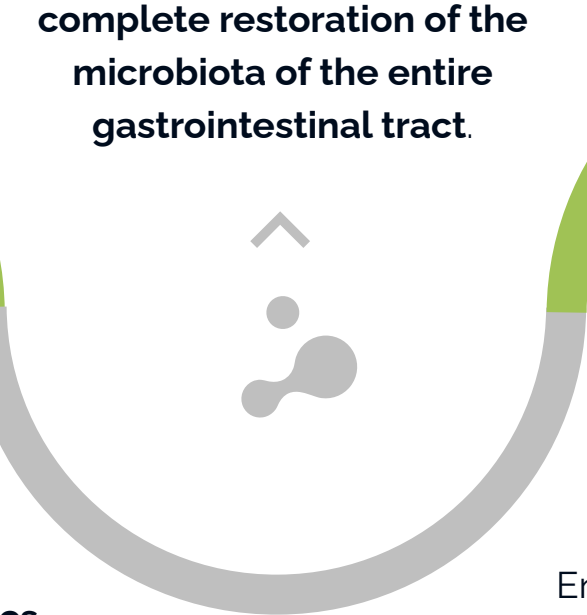

2

Wild hay bacillus (*Bacillus subtilis*) in an aerobic environment and *Bacillus Licheniformis* in an anaerobic environment contribute to the **complete restoration of the microbiota of the entire gastrointestinal tract.**

Wild hay bacillus **performs diagnostics** of the body and simultaneously **removes pathogenic agents of 4 types** - bacteria, viruses, fungi and parasites.

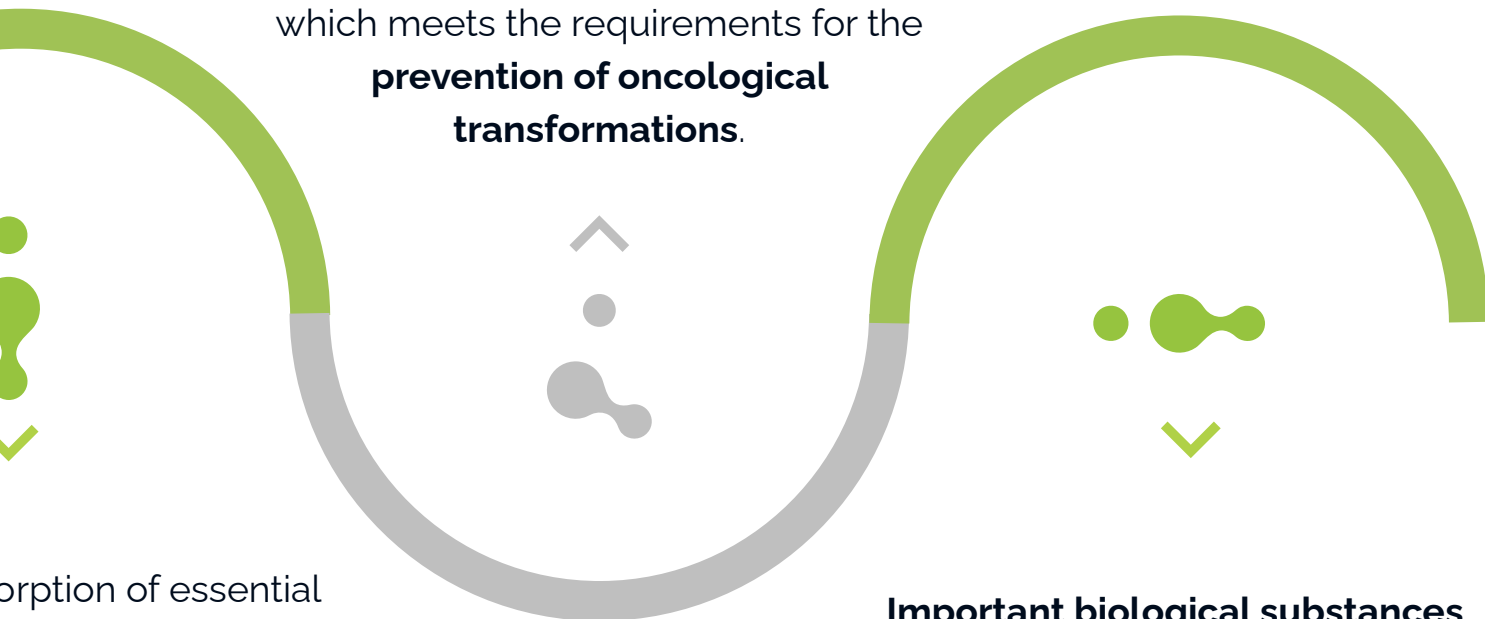

1

Ensures the absence of toxic substances and **enzymatic reactions** for the formation of the new microbiota without toxic and irritants.

4

The balance and **ratio of quantity, quality and diversity of intestinal microbiota** ensures the strength and correctness of the immune response, which meets the requirements for the **prevention of oncological transformations.**

absorption of essential
and the **initiation of**
ions, resulting in the
necessary final products
intermediate fractions.

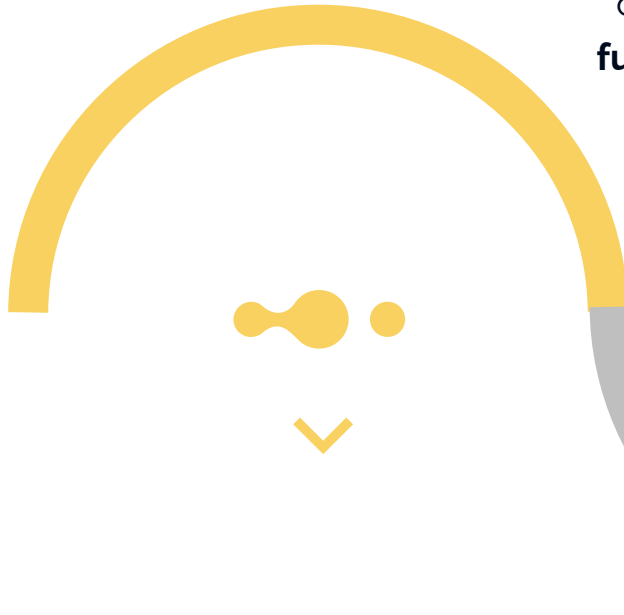

3

Important biological substances,
nucleotides, amino acids, vitamins, macro-
and micro-elements are formed, which are
quickly absorbed without requiring
breakdown.

5

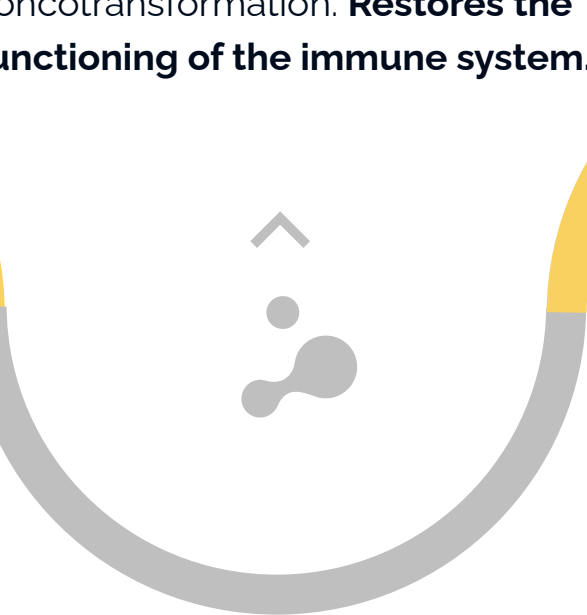

2

Increases the level of Alpha-2 interferon in the blood, which is the basis for preventing of cell oncotransformation. **Restores the functioning of the immune system.**

Normalizes the activity of all organs, systems and endocrine glands of the body.

1

3

4

Produces the necessary enzymes (proteases, lipases, amylases) for the complete breakdown of food without intermediate decay products, eliminating fermentation processes.

antibiotic substances,
inflammatory processes.
and decay products.
at pH environment.

3

Restores **hormonal balance** without taking hormones. Produces important biological substances when they are lacking or absent for enzymatic reactions.

5

Nutrition

- 01** **60** minerals
- 02** **20** amino acids, of which **8** are essential
- 03** **3** polyunsaturated fatty acids
- 04** **16** vitamins
- 05** B vitamins - **B1 to B17**
- 06** Complete daily physiologically necessary composition of elements according to Academician V.I. Vernadsky
- 07** Extracts in the form of peptides and polypeptides have low molecular weight and are easily absorbed by the body.

Powder form

A concentrate of substances in dried spore form, the active ingredient of which is specific wild bacteria *Bacillus subtilis*, *Bacillus Licheniformis* and plant extracts.

Alcohol-free
balms

Contains wild bacteria *Bacillus Subtilis*, *Bacillus Licheniformis* and **many substances** produced by these bacteria, as well as **concentrated extracts of wild plants**.

Aqueous solutions

Water-bacterial solutions of wild plant extracts containing a **concentrate of the culture fluid** of many strains of live wild bacteria *Bacillus subtilis* and *Bacillus Licheniformis*.

Creams

Contains **concentrated biomass** of wild bacteria *Bacillus Subtillis*, *Bacillus Licheniformis*, vegetable and essential oils, agar-agar

Powder

Pre-probiotic

- Produces natural antibiotic substances, enzymes, vitamins, micro- and macro-nutrients
- Provides antibacterial, antiviral, antifungal, antiparasitic protection of the body
- Normalizes immune status
- Promotes the induction of endogenous alpha-2 interferon

Promotes detoxification of the body

- Simultaneously removes all types of pathogenic flora from the body - bacteria, viruses, fungi, toxins, allergens, as well as harmful products of their vital activity
- Removes radionuclides and decay products from food, alcohol, drug, medicinal and biological poisoning

and macro-elements
the body

Balms

Systemic metabiotics

Gastric

Affects the digestive, endocrine and nervous systems

Vascular

Affects the cardiovascular system and vascular elasticity

A
th

Immune

Affects the immune system and the production of its own alpha-2 interferon

Brain

Affects the cardiovascular and nervous systems, the production of central hormones and their balance

Balm Ж

Gastric metabiotic

For the digestive system:

- Restores the digestive tract along its entire length
- Normalizes eating behavior, reduces appetite and eliminates cravings

For the endocrine system:

- Effective in obesity, treatment of diabetes, insulin resistance, metabolic syndrome

For the nervous system:

- Promotes the production of neurotransmitters
- Restores connections between intestinal and brain cells

For the musculoskeletal system:

- Produces its own collagen
- Restores elasticity of the ligamentous apparatus

s for sweets

Balm C

Vascular metabiotic

For the cardiovascular system:

- Restores the structure of vascular endothelium
- Restores elasticity and integrity of blood vessels
- Improves rheological properties of blood

Therapeutic effect:

- Prevents thrombus formation
- It is a means of preventing thrombosis, strokes, and heart attacks.
- Effective for hypertension
- Eliminates blood pressure surges

Relieves inflammation:

- Removes symptoms of damage by any pathogenic agents, especially v

viruses

Balm N

Immune metabiotic

For the immune system:

- Induces production of natural alpha-2 interferon

Therapeutic effect:

- Forms the correct immune response to the penetration of any pathogenic agent
- Promotes the production of the required number of "correct" immune system cells for full protection of the body
- Protects against cancer

Alpha-2 interferon:

- It is the most important component of the body's defense against infections and cancer transformations

fections and tumor

Balm M

Brain metabiotic

For the nervous system:

- Restores neural connections and the functioning of damaged synapses

Therapeutic effect:

- Restores the production of hormones of central genesis, regulates melatonin
- Restores sleep and circadian rhythms
- Removes cognitive reactions and various symptoms from the nervous system and brain
- Removes the toxic effect of any infection on the thermoregulation center
- Improves psycho-emotional state

For prevention:

- Heart attacks
- Strokes of various origins
- Age-related brain degeneration

ses

ain

Aqueous solutions

Live probiotics

Functional nutrition in the form of water-bacterial solutions with bactericidal, bacteriostatic, antiviral, antifungal, antiparasitic effects

Provide rapid restoration and maintenance of the quantity, quality and diversity of beneficial microbiota after the removal of pathogenic flora from the body

Co

Reduces im
the natural
oral cavity, r
passages, l
respiratory
as the gastr
organs.

Concentrate

Reduces inflammation. Normalizes the microflora of the eyes, maxillary sinuses, nasal cavity, larynx, trachea, upper respiratory tract and lungs, as well as the gastrointestinal tract and all

Blueberry extract solution

Restores the structure of lung tissue. Saturates the blood with oxygen, increases the level of hemoglobin. Improves microcirculation. Promotes tissue regeneration.

Creams

Pre-probiotics for external
and internal use

Possess bactericidal, bacteriostatic, antiviral,
antifungal, antiparasitic effects

Designed to restore the function of skin cells and
mucous membranes

Promotes regeneration of damaged areas without
scarring

Relieves allergic reactions such as irritation, itching,
rashes and plaques

Cream-gel
intimate

For the treatment and prevention
of gastrointestinal
genitourinary tract infections

Cream-gel

For skin diseases of various etiologies. For injuries, hematomas, burns and frostbite of varying severity. In dentistry, urology, in complex treatment of the gastrointestinal tract. In postoperative recovery.

Cream-gel for joints

For injuries and hematomas, damage to bones, periosteum, joints, deformation of cartilage tissue, ruptures and stretching of ligaments, hernias. For complex treatment of arthritis, arthrosis, skin diseases. In cosmetology and plastic surgery.
